Description

When you use redmine to manage multiple projects, you often want Issue summaries across all projects, list RoadMap for "system" shared versions, Activity for all my projects, and maybe even a common wiki.

Views for some of these reports already exist like /issues, /activity, /versions/show/...

It could be useful to create navigation tabs on redmine homepage to link to these:

Overview | Activity | RoadMap | Issues | Wiki

History

+1

We are running Redmine in a multiproject environment and i'd like to see this.

I propose adding a new entry "Site" in the topline navigator and putting whatever functionality redmine provides to help with managing multiple projects there.
The navigator could read: "Home   My page   Site   Projects   Help"

Maybe there is a plugin to solve this and other issues about handling multiple projects?
