

Redmine - Defect #4855

Emission email address regression.

2010-02-17 08:40 - Anonymous

Status:	Closed	Start date:	2010-02-17
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Email notifications	Estimated time:	0.00 hour
Target version:		Affected version:	0.9.2
Resolution:	Cant reproduce		
Description On version 0.8.x it was possible to define the <i>Emission email address</i> like: <pre>This Is Email From Redmine <redmine@redmine.org></pre> When upgrading to 0.9.2 it silently fails to send emails (even with email logging on?). If try to redefine the same type of email-address it gives a error that it's not valid.

Revision 3443 - 2010-02-17 20:08 - Jean-Philippe Lang

Adds a test for emission address with phrase (#4855).

History

#1 - 2010-02-17 09:42 - Felix Schäfer

Works correctly here with `\ "some name\ " <redmine@some.place>` on trunk.

#2 - 2010-02-17 09:44 - Felix Schäfer

Ok, in a pre block so that nothing gets garbled :-)

```
\ "some name\ " <redmine@some.place>
```

[...]

When I try that, it 'saves' ok, but sending test-email fails with error-message:

```
An error occurred while sending mail (501 <"some name" >: "@" or "." expected after ""some name"" )
```

So it looks like this issue is already fixed in trunk,
I think I'll wait for a updated version then.

Thanks.

There is no difference I'd know of between 0.9.2 and trunk concerning this point. Be sure to include the escapes `\` in front of the `"` s, they are *not* the result of any garbleage, the string in my second comment is literally in there in my installation.

Thank you for the quick responds,
but I did exactly what you said (with the \" escapes), but it still doesn't work for me.

I did some research and found this: <https://rails.lighthouseapp.com/projects/8994/tickets/2340>
It talks about a similar issue with actionmailer (which is used in rails/Redmine? I'm no Ruby programmer),
the issue is fixed, but it 'missed' release v2.3.5, which is used by Redmine(?).

#6 - 2010-02-17 13:20 - Felix Schäfer

Redmine 0.9.2 runs on rails 2.3.5 indeed, and ActionMailer is one of the frameworks rails consists of. Anyway, I don't know if trunk and 0.9.2 differ in some ways on the mail-sending parts, or if the ruby and/or rails packages from gentoo are patched around this already, but I can use any of the following three schemes, and neither redmine borks, nor do my mail agents show anything unexpected:

```
\ "some name\" <redmine@some.place>  
"some name" <redmine@some.place>  
some name <redmine@some.place>
```

I'm using ubuntu 8.10 server, but with rails 2.3.5 installed via gem. So maybe you're right about gentoo.
Thanks anyway!

#8 - 2010-02-17 20:10 - Jean-Philippe Lang

- *Status changed from New to Closed*
- *Resolution set to Cant reproduce*

The following setting actually works:

```
some name <redmine@some.place>
```

I've also added a test for that in [r3443](#).

#9 - 2010-03-06 23:22 - Markus Falb

I updated today an old redmine instance from 0.8.4 to 0.9.3 and this issue was hitting me too.
I do not run gentoo but CentOS 5.4.
hmmm...
