

Redmine - Feature #4862

Search engine doesn't look inside documents

Description The search engine in Redmine doesn't check inside documents (just titles and description) and this would be really useful. Wouldn't it be possible to make Redmine work with some search engine like mnogosearch that already does that? It would be very interesting also because that way it would be possible to index also stuff outside Redmine. Maybe there could be a setting to choose between the internat engine or an external one. (Redmine 0.9.0 on Debian 5.0.3)
