# Redmine - Feature #4863

## Wiki and mediawiki

**Description**

If someone already had a mediawiki installation, wouldn't it be possible to see it inside Redmine? I mean: wouldn't it be possible to have the choice to use the internal wiki or an external one?

Or: isn't it possible to import existing mediawiki contents into Redmine wiki? (maybe leaving the possibility to return back to mediawiki again if desired) (Redmine 0.9.0 on Debian 5.0.3)

## History

Matteo,
You can try [Tab plugin](#) as a temporary solution. I am using it for some internal apps.

FYI in case it helps -- I just published a tiny Redmine plugin ("Wiki External") that allows you to point to an external wiki instead of Redmine's internal wiki. It does not "integrate" as much as "point to" -- this was useful in cases where an external wiki is publicly accessible but the Redmine installation was kept internal. So far I have only tested it with MediaWiki installations.
