Description

I'm working on the installation against an oracle database. Not sure if anyone has done this yet, as it seems to be out of the norm. Anyways, the script bombs on the creation of the comments table.

Looking at the DDL, 'comment' is a reserved word in oracle. You cannot create a column with this name. 'Comments' works like a charm though. How can I change this?

Thanks in advance. Really excited on getting this going.

Sorry, I didn't test it with Oracle since a long time.
There's 5 tables with a column named 'comment'.
And at this time, i see no **easy** way to solve this problem...
