

Redmine - Feature #4980

Reference to a commit in a different project

2010-03-03 17:40 - Damien MATHIEU

<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b> Using git, every commit in the repository has a different hash. The chances to have twice the same hash in two different repositories are quite low. However when we reference a commit (with commit:xxx) in an issue but this commit is not in the project's repository but in an other's, the link isn't made.  Perhaps displaying something like (project's name)commit in the link so we would see it's not in the current project but we're going somewhere else ?
