Redmine - Defect #5070

Redmine.pm does not allow Administrators to access svn repositories

2010-03-13 23:49 - Bryce Nordgren

Status:	New	**Start date:**	2010-03-13
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:	SCM extra	**Estimated time:**	0.00 hour
Target version:			
Resolution:		**Affected version:**	0.9.3

Description

The following SQL code does not detect that a user is an Administrator and denies access:

```
my $query = "SELECT
               hashed_password, auth_source_id, permissions
             FROM members, projects, users, roles, member_roles
             WHERE
               projects.id=members.project_id
               AND member_roles.member_id=members.id
               AND users.id=members.user_id
               AND roles.id=member_roles.role_id
               AND users.status=1
               AND login=?
               AND identifier=? ";
```

Adding myself as a member of the project within redmine permitted access.

Note there is a related issue: #3712, where someone has uploaded an "improved version" of Redmine.pm, having significantly enhanced features. I will try this version next, to see if it allows Redmine administrators to have access to the Redmine-managed subversion repositories. Perhaps it would be worth accepting the improved version into the main distribution as an easy fix for this issue (if it works)?

History

#1 - 2010-03-15 22:50 - Bryce Nordgren

The alternate version of Redmine.pm in #3712 does not allow admins to browse/commit to repositories. However, it still has some very nice features which would be good to have merged into the main release. ;)

#2 - 2010-03-16 11:57 - Roman Savrulin

I have the same issue, but even adding myself as a member of a project does not permit access

#3 - 2011-03-24 07:59 - Toshi MARUYAMA

- Category changed from SCM to SCM extra

#4 - 2012-05-09 14:21 - Karel Pičman
