

Redmine - Defect #5090

Wrong label in issue-journal for subtask-changes

2010-03-15 22:24 - Mischa The Evil

Status:	Closed	Start date:	2010-03-15
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Fixed		
Description			
I've noticed a thingy after the implementation of #443. A wrong label (Subproject of) is used in issue-journals after subtask-changes. Also the subtask-ids are used instead of them being parsed to linkable issues.			
I'll attach yet another screenshot to clarify the issue. Please let me know if any questions arise..			
Regards

Fixed in [r3593](#). Thanks for pointing it out.

Also the subtask-ids are used instead of them being parsed to linkable issues.

I've prepended the ids with a # so that they look like issue ids but I will not make then clickable them for now. Just to avoid a few more database queries...
