Description

I am evaluating several of these programs right now and trying to choose one. I like the direction Redmine is going
but it seems to be missing some reporting that would make it a no-brainer for me such as the per milestone/version views
shown here:

http://trac.edgewall.org/milestone/0.10.5?by=owner

It seems very intuitive to be able to click on a milestone in the roadmap view and see these types of mini reports.

Thank you :-)
