Description			
<p>Hi,</p> <p>I did the following using Redmine:-</p> <ol style="list-style-type: none">1) Created a set of issues A and B2) Set the time of A from 18th to 20th.2) Set the condition that B always follows A which means B now has the time 21st to 22nd. <p>The dates were accordingly updated. Now I did the following:-</p> <ol style="list-style-type: none">1) Created a new issue C from 18th to 20th.2) Set the condition that A follows C which means A is updated to 21st to 22nd. <p>Ideally in this case, both A and B should be "shifted" to newer dates. But currently only A is getting updated from 21st to 22nd which leads to a clash between A and B(21st to 22nd). Should I use something else to force B to be updated too?</p>
