

Redmine - Feature #5168

Preview option when editing issues and notes

Description Currently Redmine provides a 'preview' feature when creating an issue for the first time or creating a new note on an issue. It would be nice if the user could also preview changes to the texts of issue descriptions and notes. At the moment the only option is to commit a change and see what it looks like, then edit it again, which can cause a lot of email notifications to be sent out.

+1

I agree with this.

We're storing large use-case/user stories as descriptions in the issues in our 'User stories' tracker, these edits really need to be previewed before saving them.

- Category set to UI
- Status changed from New to Closed
- Resolution set to Fixed

The "Preview" link at the bottom of the issue edit pane generates previews for the note as well as for the description fields, though I can't say for sure in which cases which one is shown (I'd wager either one only if edited).

This was raised again as [#5520](#) and subsequently fixed.
