

Redmine - Feature #5246

Interesting to create detailed reports

Description It would be interesting to create detailed reports with more fields. How is this done?. The actual version just make a report only for 3 items, no more. Thanx :-)

I think Alejandro's point was that after the third field is added to the report, you are not allowed to select any further fields for inclusion.

Anyway, it appears that the 7 (I think) available fields do not include user-added fields, at least on the recent trunk version that I'm using. I can see the new type of tracker I have included, but not the custom fields I have added to projects and trackers.

I just stumbled across Issue [#4249](#) (Generate report by custom fields on a project, targeted for version 1.0), which although does not address the 3-item limit, it does address that of custom fields.
