

Redmine - Feature #528

Wiki Page Hierarchy and Breadcrumbs

2007-12-27 13:42 - Ron Monson

Target version: 0.8	
Resolution: Fixed	
Description The ability to relate wiki pages in a parent/child fashion can be very useful. Many times wiki pages are implicitly linked by simply using wiki links but to create backlinks or breadcrumbs you have to manually add all of the wiki links. If pages could be explicitly linked then backlinks could be added to the page automatically. In addition, a special tag could render a table of the child pages of any given page. I will add a patch for all of this functionality in "Patches". See the attached screenshots for examples.

Associated revisions

Revision 1698 - 2008-07-26 13:46 - Jean-Philippe Lang

Wiki page hierarchy (#528). Parent page can be assigned on Rename screen.

Revision 1699 - 2008-07-26 14:54 - Jean-Philippe Lang

Adds child_pages macro for wiki pages (#528).

I find your patch pretty usefull.
Does anybody else interested in this functionality ?

I would really like this feature.

It reminds me of mediawiki's index feature, which I was just about to request. So please include an index based on the headings of a current page also.

- Target version set to 0.8

#5 - 2008-04-02 15:34 - Curtis Stewart

I would really like this feature also.

I am currently having some users build a set of custom help screens for an application. This app. is of course, being tracked has a project. This proposed feature will allow us to relate the help screens and not deal with the other wika pages that are in the project supporting the help desk and developers. All of the help screens would be in the proposed parent /child relationship.

#6 - 2008-04-17 16:48 - Carl Nygard

Perhaps a stupid idea, but is it possible to build the breadcrumbs from noting which page you traversed from?

Pro:

- multiply linked pages (i.e. multiple ways to get to PageX) would have proper trail
- it-just-works, easier than having to maintain links explicitly

Con:

- passing URL to someone to access directly wouldn't have any breadcrumb history

is this exposed like ParentPage/Childpage in the url? or is it more like a category, or a tag of a page?

- *Category set to Wiki*

- *Status changed from New to Closed*

- *Resolution set to Fixed*

Functionality added in [r1698](#).

Implementation is different from patch [#243](#) but it's database compatible (column parent_id added to wiki_pages table) so people how have applied this patch can safely use the mainline implementation instead.

Parent page assignment is done on the Rename screen.

Can anybody please make a patch for version 0.7.3?

I need this feature very much, but if I try to apply changes onto 0.7.3 - it doesn't work correctly.

#18 - 2008-08-03 15:08 - Sascha Egerer

why you don't upgrade to the latest version. the patch is already included there

#19 - 2008-08-04 10:39 - clawfrown clawfrown

I'd like to very much and will do that later, but at the moment I have difficulties with installation of Rails 2.1 + it requires time for setup etc. which i don't have now..

But need to put alot of info to wiki now (without this function it is a pain to write down breadcrumbs manually).

#20 - 2011-01-06 00:03 - Kimus Linuxus

strangely I don't have this feature in the current stable release of redmine!?
