Description Hi All, We have installed redmine for a customer of us. We now have to tweak it a little bit. What we want. We have 4 user roles/groups e.g. Odontos, Ortholab, Ortholab Zuid and Orthotec. They all have their own customers for which they can make an issue. I want that if a user from usergroup Ortholab is logged in, that they only see their own customers. The problem is that I'm completely not Ruby on Rails minded, so I don't know how I can print the role_id. I've tried the following, but I'm always getting an Internal server error. <%= Member.role_id > <= Member->role_id > <= Member=>role_id > <= Member::role_id > <= Member(:role_id) %> I want to make it like this. <script type="text/javascript"> jQuery.noConflict(); var labo = <%= Member.role_id %>; var prefix; if(labo == '4') { prefix = '01-'; } else if(labo == 5) { prefix = '02-'; } else if(labo == 6) { prefix = '03-'; } else if(labo == 7) { prefix = '04-'; } jQuery(document).ready(function() { jQuery('#issue_custom_field_values_1').find('option').each(function(i) { if(jQuery(this).attr('value').substr(0,3) != prefix && jQuery(this).attr('value') != '') { jQuery(this).remove(); } }); }); </script> Does someone of you know a solution?
