Description

I have downloaded Redmine and make it run,but the setting make me some headache.1st,I have to create some roles,like developer,project manager etc.2nd,I have to create some trackers.3rd,I have to create some status.The end,I have to create some Workflow.In most case,I think,some default settings for those will be enough.

You should have read the install doc :-)
A simple rake task does the job.
See:
http://www.redmine.org/wiki/redmine/RedmineInstall (point 5).
