<b>Description</b>			
<p>If an issue has revisions associated with it, the history and the generated PDF should list those revisions and the commit message for each.</p> <p>The list of revisions on the side of the description is too subtle and isn't enough information. Having them inline with the other history files would be more helpful.</p> <p>On a quick glance, I think it would make most sense to have a new Journal created whenever a changeset is assigned to an issue. Then you'd get them into the history and the pdf for free.</p> <p>On second thought though, there might be problems with existing data, as well as duplication of commit messages and stuff. So maybe the Issue#changesets and Issues#journals could just be combined and sorted on date.</p> <p>This would go nice with <a href="#">#11269</a> :)</p>			

History

#1 - 2008-01-20 10:40 - Jean-Philippe Lang

Related commit messages are added to the issue details view (html and pdf) in [r1085](#), but they're not combined with comments and changes.
