

Redmine - Defect #5433

select from in updates causing 'page not found'

2010-05-03 23:16 - Garrett Shulman

Status:	Closed	Start date:	2010-05-03
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Cant reproduce		
<b>Description</b> <p>I have gotten a number of reports from users of a redmine instance that sometimes when they try to add an update to an issue they end up at a page which says "Page not found The page you were trying to access doesn't exist or has been removed. Back". I was able to get a copy of the text of an update causing this behavior and narrowed it down to the text 'select from' (the original was like 'selection ... from'. In the log I see: ActionController::RoutingError (No route matches "/500.shtml" with {:method=&gt;:get}): Rendering /home/strategy/redmine/public/404.html (404 Not Found)</p> <p>I'm thinking that this may be related to some input validation for sql injection. I'm curious to see if this update will post. Any ideas about things I might try so that users don't see the 404? The redmine instance is running latest svn trunk. Thanks! -Garrett</p>			

History

#1 - 2010-05-05 21:56 - Jean-Philippe Lang

the original was like 'selection ... from'

#2 - 2010-05-05 21:57 - Jean-Philippe Lang

Previous update seems to work.

#3 - 2010-05-05 22:00 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to Cant reproduce
