

Redmine - Patch #5447

User status can not be changed with javascript disabled

2010-05-05 17:39 - Holger Just

Target version:			
Description			
If an admin-user has javascript disabled, she can not update the status of a user.			
The generated links (by change_status_link) require some javascript to turn the request into a POST. /users/:id/edit does not allow changing the state with a GET, which leaves the admin-user without further options.			
The attached patch adds a status select box to the user edit form. This however does still not resolve the non-functioning of the change_status_link, but at least provides a workaround.
