Resolution:			

Description

Subtask feature was implemented in r3573.
In comparision to Erics patch in ticket #443 we have a different subtasks view now.
  Hierarchy
I would like to see the subtasks view of Erics patch.
  Hierarchy

Reasons why I find erics solution better:
- you can see in one table which tickets belong together. In the trunk solution you always have to look at the middle and at the top to correlate the tickets.
- you are able to make actions (change status etc.) on the parent and child tickets in erics solution. This is very cool in my eyes because you see more information like comments in difference to the default ticket view (under menu entry ticket).
