

Redmine - Defect #5527

Link in pre tag for comment

2010-05-14 12:27 - minkbear minkbear

Status:	Closed	Start date:	2010-05-14
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	0.9.4
Resolution:	Cant reproduce		
Description If you insert text below with pre tag in any comment of issues, it appears link to issues. but for inserting the same text on description of a new issue, it does not appear the link. <pre> ul.simplePageNav li a{ color: #333; text-decoration: none; } </pre> Step to reproduce: 1. Goto any existing issues 2. Click on "Update" button 3. Insert above text in note. You'll see the link to issues.			

History

Sorry I don't understand the problem. Do you mean the #333 is turned into a link to issue 333 on your redmine install ? Or it is something else ?

If this is it, I was not able to reproduce. Can you read [SubmittingBugs](#) and provide all the requested informations ? Thank you

#2 - 2010-07-13 09:39 - bato bato

I encountered a similar Problem with links within a Wiki pages and pre tag.
Link inside a pre tag to other wiki pages doesn't work.

```
Link to other wiki page: [[wiki_page]]
```

This is a regression to older Redmine versions

I found also a submitted bug report for similar issue (see [#5800](#))

#3 - 2010-12-30 04:37 - Mischa The Evil

- Status changed from New to Closed

- Resolution set to Cant reproduce

@ minkbear: closing this issue because it seems not possible to reproduce the described behaviour and there hasn't been given more feedback.

This is a regression to older Redmine versions

Indeed. You *could* call this a regression, introduced in Redmine [1.0.0 \(RC\)](#) on behalf of issue [#1288](#). Though, IMHO this is rather an improvement instead of a regression...

#4 - 2013-06-06 09:21 - Patrick Sernetz

We've fixed this issue in our redmine with the help of a css class.

Just pass this css code

```
.pre {  
    font-size: 1.15em;  
    font-family: monospace;  
    margin-left: 20px;  
    margin-right: 10px;  
    border-style:solid;  
    border-width:1px;  
    border-color: #DADADA;  
    background-color: #FAFAFA;  
    padding-left: 0px;  
    padding-top:5px;  
    padding-bottom:5px;  
    white-space: pre-wrap;  
    white-space: -moz-pre-wrap;  
    white-space: -pre-wrap;  
    white-space: -o-pre-wrap;  
    word-wrap: break-word;  
}
```

and use this tag to create pre blocks with links on your wiki page

`p

```
 
````.
