

Redmine - Defect #5545

Active Directory user account with a password {space} failed LDAP authentication

2010-05-18 11:23 - Hansen Ler

Status:	New	Start date:	2010-05-18
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:	LDAP	Estimated time:	0.00 hour
Target version:		Affected version:	0.9.4
Resolution:			
Description			
Tested with Redmine v0.9.4.			
Under Settings > Authentication Minimum password length: 1			
AD User: test AD Password: {space}			
LDAP Authentication failed.			
I've tested with manual User account by creating a new user with a password {space} which works fine. Doesn't seem to have this issue if we are using {space} as password. LDAP authentication with {space} and one character causes an issue.			
However, if we change the following:			
Under Settings > Authentication Minimum password length: 2			
AD User: test AD Password: {space}1 LDAP Authentication success!			
Password has to be accompanied with a character if space has is to be used. Curious, I tried a special character as password for the AD using '@'. It passes.			
I usually use space as password for test users, so it's easy for them to login.			
Conclusion: Issue with parsing {space} password with AD?			

History

#1 - 2010-07-30 13:29 - Hansen Ler

- Status changed from New to Resolved

- % Done changed from 0 to 100

D:\redmine\app\models\auth_source_ldap.rb
under the function authenticate, change the password.blank? to password.nil?
i.e:

```
def authenticate(login, password)
  return nil if login.blank? || password.nil?
```

=====

More Information =====

From <http://api.rubyonrails.org/classes/Object.html>,

blank?() - An object is blank if it's false, empty, or a whitespace string. For example, "", " ", nil, [], and {} are blank.

I wonder if it is alright to patch the redmine server or add as new functions. Anyways, that's the fix for now! Cheers!

- Status changed from Resolved to New

Thanks for the report and the possible fix, please don't set the status on "resolved" on redmine.org though, as this status is used for "committed to trunk but not in a release yet" issues.

The change seems sensible to me. Eric, I don't think you will want a patch for that, do you? ;-)

#3 - 2010-07-31 02:08 - Eric Davis

I'm not sure what you're asking for here. Do you want Redmine and it's LDAP to support users with an empty password?

#4 - 2010-07-31 11:40 - Felix Schäfer

A space is not empty, though String#blank? will treat it as empty. The better thing to test for would be emptiness rather than blankness.

#5 - 2010-08-04 05:24 - Hansen Ler

For the latest Redmine v. 1.0.0, there is more than one password validation. That is in

```
redmine\app\models\auth_source_ldap.rb
line 34:
def authenticate(login, password)
return nil if login.blank? || password.blank?
```

```
Line Bourdages 95: # Check if a DN (user record) authenticates with the password
def authenticate_dn(dn, password)
if dn.present? && password.present?
@
```

As the method .blank will remove white space and method .present = !blank, changing them to password.nil? at line 35 and !password.nil? at line 97 will allow single character {space} as the password.

Personally, I do think removing whitespaces for password is a good idea. This is because, for Microsoft LDAP, there is no enforcement to prevent spaces not to be used for leading or trailing. This maybe rare, but if a user did change it to this type, it's super hard to troubleshoot! Hence, .blank method may not be the best check.

That's the fix for now!

#6 - 2010-09-01 08:52 - Hansen Ler

This fix applies to version 1.0.1 as well

*Note: I cannot change the Affected version properties. Anyone can advise? -
