Resolution:	Invalid	**Affected version:**	

Description

Hello,

I followed the directions on this site http://www.fsdev.net/projects/support/wiki/Configure_Subversion and I have one project in my project. I ran the ruby script to create the repo and when I try to go to my svn repo it gives me a username and password prompt when I type in admin, admin and it doesn't work. Is there anything else I need to do?

Thanks,

- Status changed from New to Closed

- Resolution set to Invalid

Please visit the forums for help.

As to your problem: administrator status is not taken into account by the redmine.pm, so your user needs to be member of the project and have permission to view the repository.
