Description

I'm using the shared version feature (issue #465) to use a version of a parent project in a child project's issue as target version. This works basically but in the subproject's gantt the version is not shown.

This bug can by reproduced in the redmine demo setup, the main project defining several versions using all three types of sharing:

- http://demo.redmine.org/projects/milestoned/settings/versions
- http://demo.redmine.org/projects/milestoned/issues/gantt

and a subproject with issues depending on these versions:

• http://demo.redmine.org/projects/milestoned-1/issues/gantt

Thank you very much. Indeed your patch fixed that issue in v1.0.0 and I've not observed any side effects so far.

So is there any chance to get it into trunk or even v1.0.1?

+1 would like this in the trunk, too.
