Description

The fugue set ([google code project](#), [preview](#)) seems to be a lot more complete than the famfamfam set. I was looking at famfamfam for an activity icon for a plugin, but couldn't find something that really satisfied me, fugue offers more choice, but I don't want to mix them.

Is someone really badly attached to famfamfam, or is it thinkable to replace the icon set?

check out the icon addons for FamFamFam silk icons. Maybe you will find what you need:

- http://projects.opengeo.org/geosilk
- http://damieng.com/creative/icons/silk-companion-1-icons
- http://www.cagintranet.com/archive/download-famfamfam-silk-companion-2-icon-pack/

Well, I went with a pair of the stock ones, and nothing in those you've linked really floats my boat more than the others, but they look great nonetheless, thanks a bunch for the heads-up :-)

HiDPI (32px) version of Fugue icons are available.
https://github.com/chrisjbillington/fugue-2x-icons

Although we are considering moving to vector icons ([#23980](#)), I think using Fugue's HiDPI icons is a good choice as a small improvement until that happens.
