Redmine - Feature #5859

Search for similiar tickets when creating a new one

2010-07-09 15:27 - Aron Rotteveel

Target version:				
Resolution:	Duplicate			

Description

It would be nice to see an AJAX-call being made during issue creation, based on the subject (and perhaps description) of the newly created ticket. A crossreference search should be made in order to determine if a similiar issue was not already added to the system.

Of course, it would not be able to make this 100% foolproof, but I believe this would definately help in cutting down duplicates.

Hehe, I just noticed issue #5840.

(I think I proved my point :p)
