Redmine - Feature #586

I would like to be able to filter for issues with Priority >= High

Description

We're using RedMine more and more, and it's great!
But now filtering and searching are more important, because I've got more and more issues to sort through.
One feature that would help would be the ability to filter issues based on relative priorities (eg Priority >= High)
as opposed to exact priorities (eg Priority == High).
Currently, I have to do three passes, for High, Urgent, and Immediate.

Thanks again for a great tool!

It's already possible. Here is how to do:

- display the 'priority' filter on the issue list
- click on the little + on the right of the drop donw list of
  priorities
- keep the CTRL key pressed and select the 3 priorities (High,
  Urgent, and Immediate)

you can even save this query if you use it often.
