Description

Hello,

I'm running redmine with Hebrew translation and Rtl theme. PDF export doesn't work at all (HTTP 500).

I created an issue with Hebrew text on the demo redmine, and exported it to PDF. The Hebrew became gibberish.

Ok, it has nothing to do with the Rtl theme. Apparently, the encoding specified in he.yml (ISO-8859-8-I) is not supported in iconv, so it crashes... It should be changed to ISO-8859-8. Still, it can't show Hebrew characters, because the used font is not in the correct encoding, and even if it would have been, it would display it reversed.

Following issue #61, I was able to produce a PDF with Hebrew characters using UTF-8, but it is reversed. Is there any way to define the PDF as RTL?
