

Redmine - Patch #5897

Use issue/forum title in URLs for search engine optimization

2010-07-18 14:09 - W Snyder

Target version:			
Description			
<p>Google and other search engines really want the URL of links to include the subject of the thing being linked to. For example, rather than "mysite.org/issues/1234" use "mysite.org/issues/1234-use-issue-title-in-URL"</p> <p>The same technique should be used for all references to issues, news, forum items, etc. The wiki doesn't need it though, as the title is already embedded.</p> <p>The attached patch does this for the key places I discovered, but no doubt is incomplete. I've been using it on my site for a few months, and the google searching has significantly improved.</p> <p>If for some reason you don't want to do this, I would still greatly appreciate it if id_titled or some other method always be called to build the URL of referenced items (and just return "id"); this makes it far easier to modify the link names for features such as this.</p> <p>Thanks</p>
