Target version:			
Resolution:	Invalid	**Affected version:**	

Description
Hello again! It seems there is a cache problem with the activity page, and it occurs on both Firefox and IE. If I make some code modifications in the activity view, I first have to empty the cache before i can see any change. Why is this happening only in the activity page, and how could I fix it?

History

#1 - 2010-07-21 13:53 - Felix Schäfer

- Status changed from New to Closed

- Resolution set to Invalid

This is expected behavior: the activity page being one of the most visited and "easiest" to decide if it needs refreshing or not, the page is served with an [ETag](#) (the requesting browser says "I'd like the activity page, but I already have one with the ETag SOMETHING" and the app responds "oh, then you already have the newest version of the page, you're good", the server doesn't generate a view or anything else in that case). You should deactivate the cache of your client (which you should do when developing anyway).
