| Description <p>Currently in the main Project view, all subprojects are shown under the major projects. No way to collapse these views. If you have many subprojects, or subprojects of subprojects this view becomes cumbersome very quickly.</p> <p>Another option that does not exist is being able to choose how much information is shown on the main 'Project' page. Being able to define what is viewable would also clean up this view. For example, I would like to be able to define only top level projects be viewable on main project page. In other words, don't display subprojects on the main page.</p> | | | |
