Target version:		Affected version:	
Resolution:	Invalid		
Description			
Hello there!			
I am using an local TYPO3 4.3.3 installation with calendarbase 1.4.0.			
On the website I need month-list-view, list, year, event and day. Unfortunately it's impossible to get anything at month-view. Not even list or monthdisplay. There doesn't arrive any data.			
I can't find any mistake by mine in the pluginconfiguration... I hope it's a bug who can be fixed...			
Bye Nicole
