Target version:				
Resolution:			**Affected version:**	

Description

I installed redmine ver 1.0.0 migrated database, filled it with default data and started web server.
On the page I printed 'search' in the search field and catched the following:

Mysql::Error: Unknown column 'text' in 'where clause': SELECT DISTINCT `wiki_pages`.id FROM `wiki_pages` LEFT OUTER JOIN `wikis` ON `wikis`.id = `wiki_pages`.wiki_id LEFT OUTER JOIN `projects` ON `projects`.id = `wikis`.project_id WHERE ((projects.status=1 AND projects.id IN (SELECT em.project_id FROM enabled_modules em WHERE em.name='wiki')) AND (((LOWER LIKE '%поиск%') OR (LOWER LIKE '%поиск%')))) ORDER BY wiki_pages.created_on DESC LIMIT 11

History

#1 - 2010-07-26 23:26 - Mikhail Sviridov

- Status changed from New to Resolved

It was a bug related to unsupported version of rails (2.3.8)

#2 - 2010-07-27 00:06 - Felix Schäfer

- Status changed from Resolved to Closed
