

Redmine - Defect #6061

html encoding of setting_multiselect

2010-08-06 17:02 - Nat Brown

Status:	Closed	Start date:	2010-08-06
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		

Description

using rails 2.3.8, ruby 1.8.7, was seeing a few of the setting_multiselect calls -- specifically in /app/views/_repositories.rhtml -- rendering as encoded html. e.g. as

```
&lt;label&gt;...
```

instead of

```
<label>...
```

this was preventing setup of a new redmine installation.

```

+  end.join)
end
```

wasn't obvious to me why some of the calls were encoding and others were not -- choices was coming in as a string array in all cases, but the patch above fixed all cases (because an extra CGI::unescapeHTML is innocuous).

i did not track into whether this is something about newer rails .join or check_box_tag or something else, but i thought i'd list it as a workaround for people at HEAD as a quickie workaround.

History

- #1 - 2010-08-06 17:23 - Felix Schäfer
- Category changed from Administration to UI
 - Status changed from New to Closed
 - Resolution set to Invalid

rails 2.3.8 isn't supported as of yet, sorry.
