<b>Description</b> I am using redmine in my workplace for project management. There are several projects in one redmine server that I am using.  It looks like that email setting can be done only for server level. I was hoping email notification can be different for each project. In some projects, we are using wiki as the main feature, and I want email notification for wiki update for this project. However, in other projects, wiki is mainly used as a help for issue tracking so there is no need for email notification of wiki update.  Hope you people consider it.  Best regards.  gogo
