Target version:				
Resolution:	Duplicate		**Affected version:**	

Description
Hi, how do I adjust the settings so I can enter localized decimal numbers to custom fields? I cannot find something to change decimal point to decimal comma. The "number.human.format.*" in the locals has effect only to show form (included in helpers - number_to_currency etc.). If you are adding a new numbers the english format is forced. I have founded http://github.com/clemens/delocalize or http://gem-session.com/2010/03/how-to-use-the-comma-as-decimal-separator-in-rails-activerecord-columns-and-text-fields, but pulling a cat's tail seems to be better fun :-). Thanks for a reply. Regards Petr
