

Redmine - Feature #6231

Version dependent to a subproject Version

2010-08-27 01:17 - Joël Lamotte

Resolution:			
Description			
<p>Having subprojects and sharing versions are very interesting and useful features.</p> <p>Now, lets say that we have this project hierarchy : * super_project * module_a * module_b</p> <p>Currently, we can set a "v1.0" version to each module (with or without sharing, that is not exactly the point). However, we can add a "v1.0" to super_project but not make this version dependant on the completion of the versions of the two other subprojects.</p> <p>Allowing having subproject versions as completion dependency for a parent version would be very useful and would complete the subproject and version features relationship.</p>

Is it related to #8991 ?

#2 - 2012-09-28 18:57 - Joël Lamotte

Not sure. Mine is about marking a version as completed only when sub project have their version completed too, as an optional behaviour.

#3 - 2012-09-28 19:05 - Joel SCHAAL

Ok sorry, I misread it...
