Description	
<p>Something really useful for daily usage in Service Now (http://service-now.com/) is the ability to right click on a ticket and select "Filter on the same..." then choose a field.</p> <p>In Redmine, it could reproduce the same request and add the desired filter. Not so complicated to implement I think.</p> <p>Let me know if you think it would be useful (and if you see what I mean..).</p>
