<b>Description</b> In role and permission setting, if I check "view issues", user will be able to view the attachments as well. Due to information security, I would like to have one role who can view issues' description and updates, but not attachments. Is there any method can fulfill this request?

- Status changed from New to Closed
- Resolution set to Invalid

You should ask this question in forum. Generally - yes, it's possible - create new role and assign required permissions to him.
