Redmine - Defect #632

Theme discovery doesn't work under JRuby on Rails war structure

2008-02-12 03:57 - M T

Target version:				
Resolution:			**Affected version:**	

Description

themes.rb makes an assumption that the themes css files will be located in the *public* folder which is at the same level as the *app* folder. However, in a JRuby on Rails war structure, the public files are actually located in the root of the WAR, whereas most of the other rails app components are under \WEB_INF.

A workaround is to copy the themes folder into \WEB_INF\public which allows the theme discovery to work.
