Redmine - Defect #6335

Unicode encoding garbled

2010-09-09 00:17 - Jean-Claude Wippler

Status:	Closed	**Start date:**	2010-09-09
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:		**Estimated time:**	0.00 hour
Target version:			
Resolution:	Invalid	**Affected version:**	

Description

The following line:

- a 100 kΩ NTC/thermistor (glass types can go up to 300°C)

... looks ok in the preview (k + ohm symbol, and degrees), but ends up as "k?" in the final page on the wiki (and as issue).

I'm entering this text here with the expectation that the same will happen: ok in preview, lost ohm-symbol in the issue.

My setup: Linux Ubuntu, Redmine 1.0.1, Markdown formatter 0.0.1 plugin. Viewing with Safari 5.0.2 on MacOSX 10.6.4.

History

#1 - 2010-09-09 00:18 - Jean-Claude Wippler

Ah - it comes out ok here. Looks like the encoding problem is in the Markdown plugin, although it is puzzling why I do get a correct preview...

#2 - 2010-09-09 09:15 - Felix Schäfer

- Status changed from New to Closed

- Resolution set to Invalid

The plugin is a third-party plugin, please contact its author for support, thanks.
