

Redmine - Feature #6381

Diagnostic mail for rake redmine:email:receive_imap

2010-09-13 14:34 - herbert koelman

Status:	New	Start date:	2010-09-13
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Email receiving	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description			
As it is in version 1.0, <i>redmine:email:receive_imap</i> doesn't log information when something has gone wrong while handling incoming mail.			
It would be a plus to reply to the mail's sender with diagnostic message.			
Say the referenced project Id in the mail's body was wrong (tag project: pid). Then <i>redmine:email:receive_imap</i> would send a mail back saying that the referenced project ID was not found in the database.			
The mail could be returned to sender or sender + a redmin administrator.

I agree. E-mails to my support address are not being pulled in to Redmine, and I'm left guessing as to exactly why.
