| Target version: | |
| Description Added from #6437 . "I think it would be useful to have a wiki block in "my page". This allows customise "my page" in many ways. I can add to my wiki page todo list, hot links and etc." | |
| Related issues: Has duplicate Redmine - Feature #6437: Support for wiki page rendering in my... Closed 2010-09-20 | |

History

#1 - 2010-09-20 15:10 - Sergei Danilov

See [#6437](#)

#2 - 2010-09-20 15:11 - Sergei Danilov

- File `_wiki.rhtml` added

#3 - 2010-09-20 15:12 - Sergei Danilov

- File `my_controller.diff` added

#4 - 2010-09-20 15:35 - Sergei Danilov

Installation

1. Goto "Administration/Custom Fields", select "Users" tab, create new text field name it "wiki"
2. Copy file `_wiki.rhtml` to `redmine\app\views\my\blocks\` folder
3. Apply patch for `my_controller.rb`
4. For desired user fill custom field "wiki" in format `project:wiki_page`
5. Goto "My Page", click "Personalize this page", add block "wiki"

That's all!

Now you can see wiki page in "My page".

#5 - 2010-09-20 15:35 - Sergei Danilov

- File `_wiki.rhtml` added

#6 - 2010-11-11 12:20 - Sergei Danilov

- Status changed from *New* to *Resolved*

#7 - 2010-11-13 10:21 - Felix Schäfer

- Status changed from *Resolved* to *New*

The status "resolved" is reserved for stuff committed to trunk but not in stable yet, thank you.

#8 - 2012-09-06 20:57 - Michael Jean

This solution did not work for me. After I try to add the wiki block it displays 500 inside the block. Then when I try to click the "my page" link again I get 500. My "my page" link will no longer display. My redmine version is 1.3.2, here is the log:

```
Processing MyController#page (for 132.156.30.171 at 2012-09-06 14:35:43) [GET]
Parameters: {"action"=>"page", "controller"=>"my"}
```

```
Rendering template within layouts/base
Rendering my/page

Rendering D:/BitNamiRedmineStack1.3.2/apps/redmine/public/500.html (500 Internal Server Error)
```

#9 - 2012-09-06 21:18 - Michael Jean

Using the other `_wiki.rhtml` file attached to this issue I get a similar error:

```
Processing MyController#page (for 132.156.30.171 at 2012-09-06 15:14:00) [GET]
Parameters: {"action"=>"page", "controller"=>"my"}
Rendering template within layouts/base
Rendering my/page
Completed in 437ms (View: 140, DB: 250) | 200 OK [http://nrgcolla-test/my/page]
```

```
Processing MyController#page_layout (for 132.156.30.171 at 2012-09-06 15:14:02) [GET]
Parameters: {"action"=>"page_layout", "controller"=>"my"}
Rendering template within layouts/base
Rendering my/page_layout
Completed in 94ms (View: 47, DB: 31) | 200 OK [http://nrgcolla-test/my/page_layout]
```

```
Processing MyController#add_block (for 132.156.30.171 at 2012-09-06 15:14:07) [POST]
Parameters: {"block"=>"wiki", "action"=>"add_block", "controller"=>"my", "authenticity_token"=>"y+APo6xutvYjPFx4QC4SVYwDFPi4AoberlfjVLuhh1A="}
```

```
ActionView::TemplateError (undefined method `content' for nil:NilClass) on line #5 of app/views/my/blocks/_wiki.rhtml:
```

```
2:     <% if !custom_value.value.blank? && custom_value.custom_field.name=="wiki" %>
3:     <% page = Wiki.find_page(custom_value) %>
4:
5:     <%= render(:partial => "wiki/content", :locals => {:content => page.content}) %>
6:     <p><%= link_to 'Edit', url_for(:controller => 'wiki', :action => 'index', :id => page.project, :page => page.title) %></p>
7:     <% end %>
8: <% end %>
```

```
app/views/my/blocks/_wiki.rhtml:5:in `_run_rhtml_app47views47my47blocks47_wiki46rhtml_locals_object_user_wiki'
app/views/my/blocks/_wiki.rhtml:1:in `_run_rhtml_app47views47my47blocks47_wiki46rhtml_locals_object_user_wiki'

```

#10 - 2012-09-07 21:29 - Michael Jean

I set up and tested the patch with Redmine 1.4.3 to compare and I found the same result. What version of Redmine is this patch compatible with?

NoMethodError in My#add_block

Showing app/views/my/blocks/_wiki.rhtml where line #5 raised:

undefined method `content' for nil:NilClass

Extracted source (around line #5):

```
2:     <% if !custom_value.value.blank? && custom_value.custom_field.name=="wiki" %>
3:       <% page = Wiki.find_page(custom_value) %>
4:
5:       <%= render(:partial => "wiki/content", :locals => {:content => page.content}) %>
6:       <p><%= link_to 'Edit', url_for(:controller => 'wiki', :action => 'index', :id => page.project, :page => page.title) %></p>
7:     <% end %>
8: <% end %>
```
