

Redmine - Defect #6454

Referencing a revision from a subproject does not work

2010-09-21 13:46 - Amit Ben Shahar

Status:	Closed	Start date:	2010-09-21

Target version:		Affected version:	1.0.1
Resolution:	Duplicate		
Description I am using a master/subproject configuration, where the master project has the repository configured. i can see the 'Associated Revisions' in all sub projects. the problem is that when i add in a note in an issue update a reference to a revision (i.e r1234) the reference is not active, except for issues directly owned by the master project. I believe this is a defect when taking into account that associated revisions is working, and that commit message the "fixes" or "refs" an issue updates it, so hierarchy should apply here too. is there a simple fix to this?
