Target version:			
Resolution:			
Description Because I have some projects where I have some Testers who don't looking there everytime I would like to have an option when a new beta-version has finished to notify the role of the testers at this project. For example by a simple form in the configuration (which is only viewable by the project administrators, or as a project module with a new permission setable to any role to allow sending mails to project roles) So Developers can send notifications to Testers or right before the release to the quality management.

+1

I would appreciate a more generic function to send an email message to selected recipients (roles, project members, user groups, users, ...) without a corresponding ticket. Maybe separate forms depending on context (to selected project members or involved user groups in case of project context, to role(s)/user(s)/user group(s) in case of administration context, etc.).

That would allow i.e. notification on planned server outages, upgrades, or other events, without creating special project and tickets for that.
