

Redmine - Feature #6530

Allow multiple projects with same name

Description Not sure if this should be a feature or patch? I setup redmine to be used as a service database for customer issue tracking. I would like to be able to use a project name for multiple instances. This would allow me to setup a customer, then have a subproject for each piece of equipment they have. I could then use the serial number of that product as the unique identifier. Ex: Customer1 - product1 - product2 Customer2 - product1 - product2 Currently i can only use a project name once, so i have to do something like this Customer1 - product1_c1 - product2_c1 Customer2 - product1_c2 - product2_c2 It's just a bit of a pain, and does not look as clean as i would like while listing the projects. If anyone has any suggestions on an alternate way to do this that would be great! Thanks for any help. Ian

- Resolution set to Duplicate

Closing as duplicate of #630. The short version: one could create wiki links to a specific page in a project with the project name instead of identifier, which requires unique names, but we will probably remove this option from the wiki links and make project names non-unique.
