Redmine - Feature #6571

Totalise numeric columns

2010-10-05 00:06 - James Robertson

Description

In the issue/ticket query/filter view, it would be help to see totals for (some) numeric columns.

For example we often need a total of the Estimated time column.

One simple option would be to show a total, at the bottom of the page, for any numeric field/column. Alternatively, it could be a configuration option to show a total only for specified numeric fields.

+1. Remaining time computation based on Estimated time and progress would be also very usefull.

This has been requested before in [#1561](#) and has been patched-in in [#2268](#) and the following issue [#4776](#).

Thanks Mischa The Evil. Patch [#4776](#) looks good, we'll probably install that.

I still feel that this is a universally useful feature though, and should be included in the trunk. What's the protocol here - do I just leave this ticket open?

Yes indeed, just leave it open and/or try to interest some more ppl for integration of this issue... :)

Note: *I'm not actually working on this issue [sic] I have removed myself as the assignee...*

I'd still like to (have the option to) display a total for any/every numeric field - not just estimated hours. Ideally the total of the the column should be display **and** the total for all issues, if more than one page of results.

#7 - 2011-09-14 07:15 - James Robertson

- File redmine_totals.user.js added

I have hacked together a Greasemonkey/Scriptish user script for adding totals to any numeric column in the issue list, browser-side. I've provided the script here in case it's of any use to anyone else.

Warning, I've only tested this in Chiliproject (Redmine fork). It's pretty fragile and relies on the table structure and class names remaining constant. I hope someone finds it useful and /or wants to make it better :-)

#8 - 2011-10-26 06:13 - Mischa The Evil

As mentioned the first time by Tony Marschall in [#8559](#) [note-4](#), there exists a plugin which provides (parts of) this feature (along with some others): [Redmine spent time column](#). It's written by Jan Schulz-Hofen of plan.io.

I've started working on some improvements to make it better suitable for this issue in my fork of it: https://github.com/MischaTheEvil/redmine_spent_time_column
