| Description <p>Every user has different priorities on what tickets they want to see. Each user will want to keep an eye on different filters of issues. It would be really nice if there was a widget for the "My Page" screen that you could add to the page multiple times that would let you create a custom filter just for you per widget use. Would let a user have a list all new tickets in ProjectA that are high priority easily on his "My Page" screen.</p> | | | |

+1 for this.

Ideally I would like that queries or issue lists on my page block should be sortable.
