| Description | | | |
| If i disable wiki, forum, project archiv or ticket module, the activity filter checkboxes are all visibel in every case. Eg i disable forum, i still have a filter for messages in activity stream. I would expect that if i disable a module its items filter in activity stream is not shown any more. | | | |

History

Does the project have sub projects? I can't remember if the activity view also checks if the module is activated somewhere below the project, but there are more shown than activated in the project itself because of sub projects.

- Status changed from *New* to *Resolved*

- % Done changed from *0* to *100*

You are right! It has subprojects which are the cause, but this behaviour is quite correct. I close my bug report as resolved.
