Description Hi, I think it would be nice to have a "text" ticket filter. So you would be able to search in a subset of tickets. e.g.: Status = new Assigned = to me Text = <a string which is in the ticket (description or note)>

I have seen that there is a new filter for subject search,
maybe it is possible to add one similar filter for history and comments?

hey!

that would be a great thing!

any chances of seeing it implemented in the near future???

A filter for description was added in Redmine 3.2 ([#1159](#)) and a filter for notes was added in 5.0 ([#5893](#)). I want a filter that searches description and note.

A filter for Notes implemented in Redmine 5.0 makes it easier to find issues. However, when you want to find issues that contain certain keywords, I think you want to search for both description and notes. In fact, I often search using the notes filter and then search again using the description filter.

It would be a great enhancement if Redmine will have a filter that searches both description and notes. Or a filter that allows you to search for the subject, description, and notes at once is also would be nice.

- *Resolution set to Duplicate*

This feature has been implemented as the new "Any searchable text" filter in [#38402](#) for the upcoming Redmine 5.1.0. The filter searches the subject, description, notes, and custom fields marked as "searchable".
