Add VIM-like keyboard shortcuts

It would be very sweet to be able to navigation the issues list from the keyboard.
examples:

j: down
k: up
o: open/view issue
x: select issue (allowing for multiple issue selection)
?: show keyboard shortcut help

I am sure there are more that would be helpful

is not related to #449?

Kind of. But here we're speaking about javascript based shortcuts that do not require using Ctrl/Alt/Shift keys like regular html accesskeys.

#4 - 2011-03-15 18:31 - Steve Koppelman

Shortcuts assigned to unmodified keys would also have the advantage of being likely to work on OS X instead of being overridden by system keybindings. ;)

2020-10-18
I've implemented these shortcuts in a plugin: https://github.com/netaustin/redmine_keyboard_shortcuts

It still needs testing, but it supports these features and more in Chrome and FF.

Anyone test this yet? When we POC'ed Jira, users really liked having the shortcuts available.

That's it. I used for Firefox.

but it could not support the Internet Explorer.

+1 for adding this feature. Redmine is missing this key feature which is now becoming quite hot, and time is ticking.

+1

Would be nice to rename this issue, and the related plugin, to "VIM-like" shortcuts. (Or, better yet (but harder): shift the focus explicitly toward customizable shortcuts.)

Most of those, who also desperately need keyboard shortcuts in general for Redmine, but come (e.g. here, via Google) from all the various other directions than Vi, may feel a bit puzzled about why "the" keyboard shortcuts feature of Redmine should mean e.g. "K" for up and "J" for down. ;)

Cheers!
Would be nice to rename this issue, and the related plugin, to "VIM-like" shortcuts.

Done.
